PROFESSIONAL SUMMARY

BSc (Hons) Information Technology undergraduate at SLIIT developing Java/Spring Boot backend services, security-focused applications and connected IoT systems. Seeking a software engineering or backend internship; focused on API design, access control, testability and maintainable delivery.

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT) | Faculty of Computing
BSc (Hons) in Information Technology | Undergraduate (in progress)

TECHNICAL SKILLS

Programming: Java 21, Python, JavaScript, TypeScript, C/C++
Backend & security: Spring Boot, REST APIs, JWT, RBAC, FastAPI
Data & messaging: PostgreSQL, MySQL, Redis, RabbitMQ, Firebase / Firestore
Engineering tools: Git, GitHub Actions, Docker, Postman, Linux, Vercel, Kubernetes/Helm foundations
Web & embedded: React, Next.js, Node.js, Arduino, ESP8266

FLAGSHIP PROJECT EXPERIENCE

Aetheris Platform | Java 21 / Spring Boot / Redis / RabbitMQ
Built gateway and JWT identity workflows, relational persistence, caching and asynchronous audit messaging; documented resilience, observability and platform-to-AI-runtime integration boundaries.

Sentinel Security Platform | Python / FastAPI / HMAC / SQLite
Implemented a pre-production security event pipeline with signed ingestion, replay checks, deterministic detections and evidence-linked alerts. Local lab, not production protection.

FloodGuard | Arduino / ESP8266 / Firebase / Next.js
Collaborated on a university IoT prototype joining ultrasonic sensing, local warning states, telemetry and a monitoring interface distinguishing live from last-recorded data.

FinalForge | JavaScript / Firebase Auth / Firestore
Built student-ID access allowlisting, institutional email verification, protected administration and resumable mock-exam practice for students.

ADDITIONAL FLAGSHIP PROJECTS

Syntra / Aetheris Runtime Governed orchestration and reasoning foundations; hardware validation pending.
BoundaryLab Pre-release Firestore authorization testing with local emulator evidence.
Averis Document ingestion and reproducible similarity-evidence analysis.
Wayfarer Travel discovery and itineraries with gated optional AI/provider integrations.

Project links open source repositories; implementation maturity is documented in each README.
