

Poojana Kaveesh

Software & Backend Engineering Undergraduate

JAVA / SPRING BOOT / PYTHON / DISTRIBUTED SYSTEMS

PROFILE

First-year BSc (Hons) Information Technology undergraduate at SLIIT, building practical software and backend engineering experience through personal and university projects. I enjoy turning system ideas into documented, testable implementations across backend services, desktop software and IoT.

ENGINEERING POSITIONING

Backend foundations

Java, Spring Boot, REST APIs, PostgreSQL, Redis and RabbitMQ.

Systems thinking

Authentication, observability, resilience, containers and deployment concepts.

End-to-end building

Desktop, cloud-connected IoT and notification-service integration.

CORE TOOLKIT

Java 21 Spring Boot Python REST APIs PostgreSQL Redis
RabbitMQ Docker Kubernetes Git React TypeScript Node.js
Firebase Arduino

OPPORTUNITY FOCUS

Ready to learn inside a practical engineering team

Target roles

Software Engineer Intern / Back End Developer / Junior Java Developer

Sri Lanka + Colombo | On-site / Hybrid / Remote | Full-time / Part-time / Internship

EDUCATION

BSc (Hons) Information Technology

SLIIT - Faculty of Computing

Currently in the first year. AI is a long-term academic direction; a specialization has not yet been selected.

AI READINESS - ACCURATE NOW

Direction: AI engineering.

Current evidence: Python and Java foundations, API design, distributed-system concepts, data structures and practical project delivery.

Next step: add evaluated AI-agent capabilities after the core Aetheris platform is reliable.

WHAT I VALUE

- Clear documentation
- Truthful implementation status
- Incremental delivery
- Learning from engineering teams

01

Aetheris Platform

PERSONAL PROJECT / BACKEND + DISTRIBUTED SYSTEMS

A staged Java and Spring Boot platform exploring an API gateway, identity and audit services, relational data, caching, messaging, observability and container deployment.

Engineering evidence: JWT and refresh-token design, roles/scopes, PostgreSQL, Redis rate limiting, RabbitMQ events, health probes and configurable Docker/Kubernetes environments. AI-agent integration remains a documented roadmap item.

Java 21

Spring Boot

PostgreSQL

Redis

RabbitMQ

OPEN REPOSITORY

02

FloodGuard

UNIVERSITY GROUP PROJECT / IOT + CLOUD

An academic flood-monitoring prototype connecting Arduino and ESP8266 sensing to Firebase-backed monitoring interfaces and user alerts.

Engineering evidence: Water-level validation, staged LED/buzzer states, LCD feedback, servo control and a Node.js WhatsApp notification service with status commands. The linked public repository covers the notification-service code.

Arduino

ESP8266

Firebase

Node.js

IoT

VIEW BOT CODE

03

AnyDL Pro Ultra

PERSONAL PROJECT / WINDOWS DESKTOP SOFTWARE

An Electron desktop application integrating external media processes with a React and TypeScript interface for Windows workflows.

Engineering evidence: Renderer-to-main communication, process handling, live progress and ETA reporting, persistent settings, error states and installer/portable packaging experiments.
